AppMasters

Introduction to the documentation:

This documentation will be presented the screens of the application AppMasters and its respective features.

This server File to use manual and shall be lodged together with the application to your users.

1- Splash Screen

AppMasters

Este é um projeto para concorrer a vaga de estagiário PHP na AppMasters

Iniciar

This screen consists of a button (start) that when clicked redirects the user to the login screen. If the user is already logged in it will be redirected to your Dashboard.
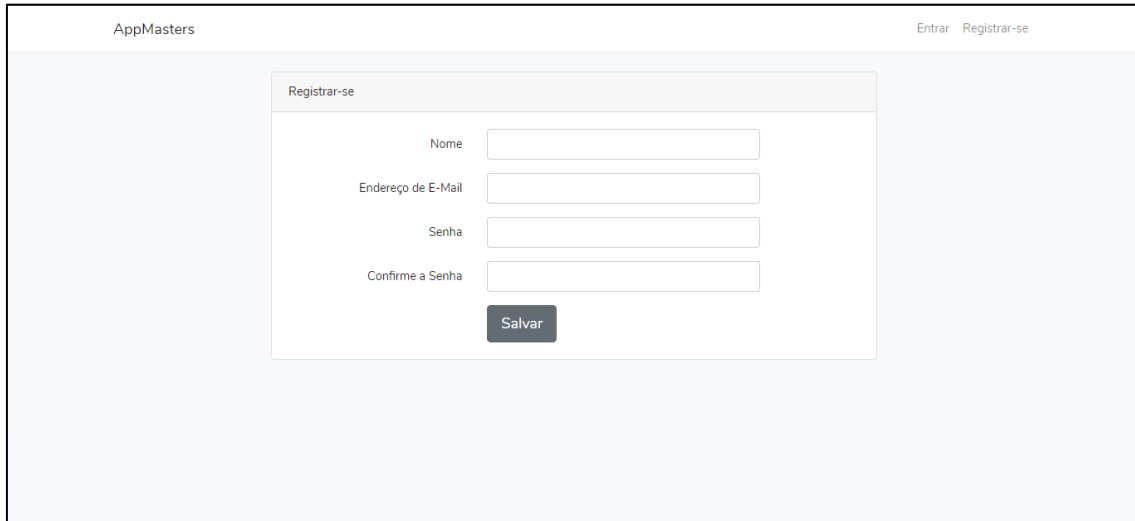

Menus:
In your top menu "Enter" has the function to redirect the user to the login screen. The same is only shown to users who have not yet been authenticated.

Register:
This function, create and save in the database a new user who is allowed to access the application.

2- Registration Screen

This screen is presented the user a simple registration form.

As a best practice, this form has validation in their proper fields, where each must be filled correctly.
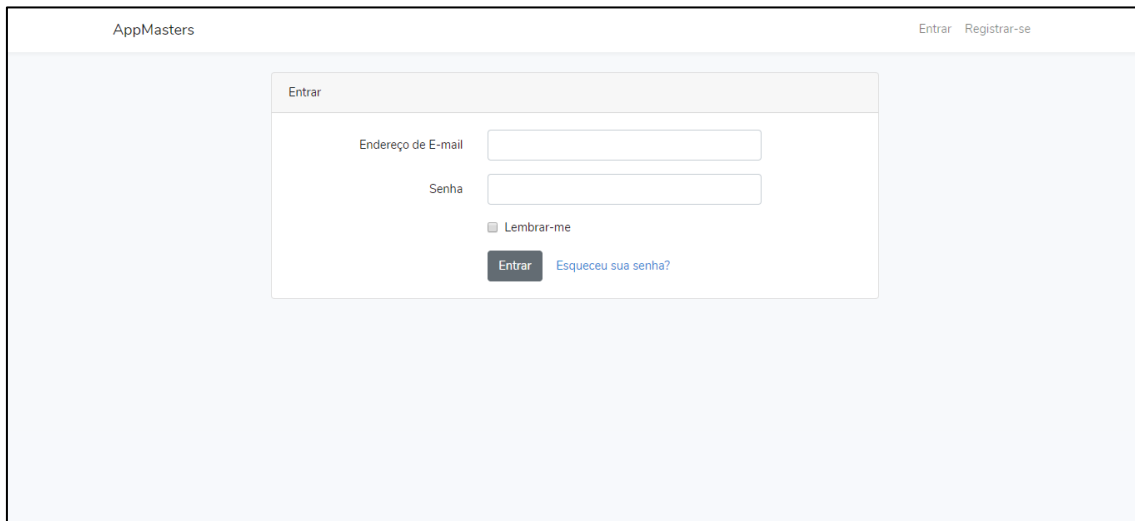

Email: text must contain default e-mail format.

Password must contain at least 6 digits.

Confirm password: must contain the same characters of password.

Save: Terminates the operation and saves the data in the database.

3- Login screen

1- This screen is necessary to inform the already registered Email and password to be able to access the Dashboard screen.

2- Are presented the menu where you can be redirected to the registration screen and ' screen ' forgot password '.

3- Below the password field is provided the CheckBox "remember me" where when selected, saves the user section.

4- **Recover password screen**

Through this screen the user can receive future in your email a token to retrieve your lost password.

This feature is currently disabled on your system.

5- Dashboard

This screen is available in two ways.

1- When the authenticated user has email: AppMasters@am.com, is offered three buttons where the user has access to specific screen to add a new user.
2- any user who does not have the email: AppMasters @ am. Will have access only to Button: load data in JSon, and registered users.

Add new user button: this button forwards the user to a new screen where you can perform the registration of other users without having to leave your section. Since the user logged in is AppMasters.
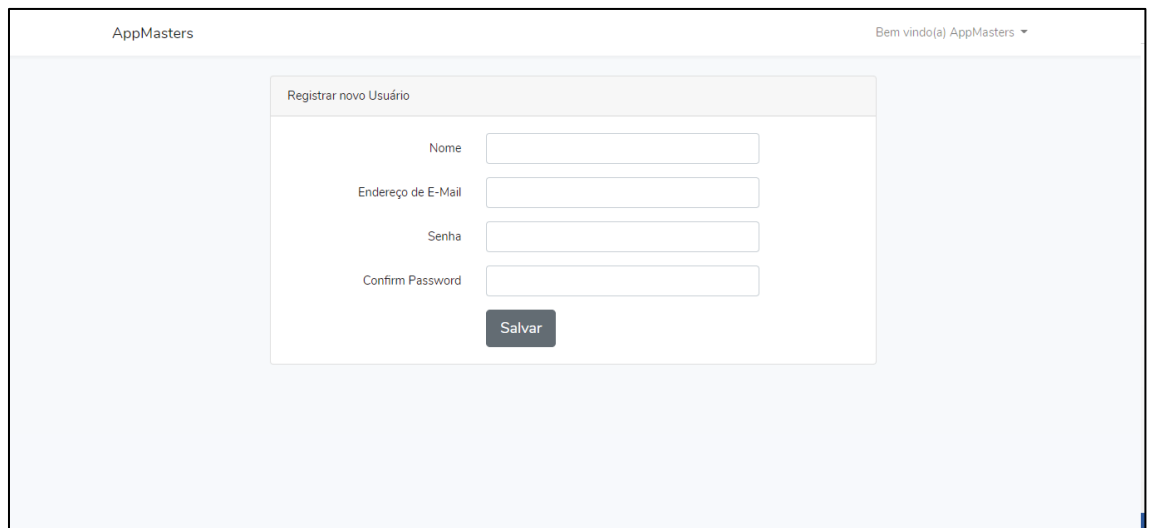

Load JSon data button: this button loads the data from all users in JSon format.
Registered Users button: This button is responsible for redirecting to a page where application will be listed name and Email of the users in a listed table.

The Dashboard screen will load the user authenticated data, with the exception of your password, which appears encrypted.

To access the top right menu by clicking the arrow, is a drop-down, where the user will have the option of completing your section making off.

6- Add new user screen

Identical to Record screen, this screen can be viewed and manipulated only by the user AppMasters.

7- JSon Data Screen

```
[{"id":3,"name":"Ramon","email":"ramon438xavier@gmail.com","updated_at":"2018-09-15 01:28:43","created_at":"2018-09-15 01:28:43"},
{"id":4,"name":"AppMasters","email":"AppMasters@am.com","updated_at":"2018-09-17 04:07:28","created_at":"2018-09-17 04:07:28"}]
```

This screen presents the data of all registered users in JSon format.

8- User Listing Screen

This screen is intended to present name and email of the registered users. So the data is presented in a tavbela Zebrada.

At the end of the page, there is the button "Home" that aims to return the Dashboard screen.

To use the system.

Dear user, this application has as destination the company AppMasters, thus the registered users in the application have a common standard., with the exception of the user

Name: AppMasters

Email: AppMasters@am.com

Password: 123456
